
Introduction

Uzma Engineering was formed in 1999 with the objective of providing technology and expertise to the oil and gas industry at every step in the value chain, from exploration & development through to production & sales.

Resource... Outsource. ... Partner

After six years of dynamic internal growth, selective recruitment and identifying technology applications, Uzma has realised its objective and now provides comprehensive one-stop resourcing, outsourcing and partnering solutions. If our clients are conducting projects in-house we can recruit or place on contract the personnel required. If our clients are outsourcing we can conduct exploration and development studies in-house. If leading edge technology is required, we can provide the solution through technology partnering.

Services

value realisation™

concept & selection studies

field review & development

well engineering & project management

peer review and value assurance

management systems

Value realisation is about providing outsourcing solutions. Our services can be delivered in our client's office or in our own secure facilities, close to the Petronas Twin Towers, where we have the latest work stations & software and the personnel to create value with them.

With our personnel and tools we have resources equal to those in major oil companies and greater than those in some smaller independents.

resource solutions

consultant placement

technical & professional recruitment

Resource Solutions is about providing clients with the personnel they require to undertake projects and operations in-house. Though focussed management and commitment to our core values Uzma Engineering has grown to become one of the leading recruitment specialists and suppliers of consultants in the oil and gas industry.

technology partnering

leading-edge solutions

training & staff development

Technology Partnering is about identifying and applying leading-edge technology in the oil and gas industry and providing the specialised training necessary to fully exploit new and existing applications.

Values & Success Factors

Providing services in an industry hungry for expansion, driven by leading edge technology and technical expertise means that at Uzma Engineering we can never be satisfied with our current performance, services and technology. We continuously strive to expand and improve our range of services to the oil and gas industry whilst concentrating on the core values and success factors which have brought us to where we are today.
